

ABSTRACT

Oxidative stress is the unmitigated accumulation of reactive oxygen species (ROS) in the body and is a key player neurological diseases like Parkinson's and Alzheimer's. Superoxide dismutase (SOD) enzymes are capable of transforming the common ROS molecule superoxide (O_2^-) into less toxic species H_2O_2 or O_2 , thus protecting the body from harmful reactions of superoxide. Synthetic metal complexes show promise as SOD mimics and could be effective alternatives to therapeutic dosing of SOD enzyme for oxidative stress.¹ In this work, we present a series of 12-membered tetra-aza pyridinophanes (Py_2N_2) and the corresponding copper complexes with substitutions on the 4-position of the pyridine ring.^{2,3} Spectroscopic and potentiometric methods were used to explore how the electronic nature of the 4-position substitution affects the electronics of the overall complex, and comparison to our established PyN_3 series explores structural change affects characterization. The SOD mimic capabilities of the $Cu[Py_2N_2]Cl_2$ series were explored using a UV-visible spectrophotometric assay. This work is an initial step toward developing these $Cu[Py_2N_2]Cl_2$ complexes as potential therapeutics for neurological diseases by mimicking SOD's capabilities and protecting the body from oxidative stress.

SYNTHESIS

CHARACTERIZATION - ¹H NMR

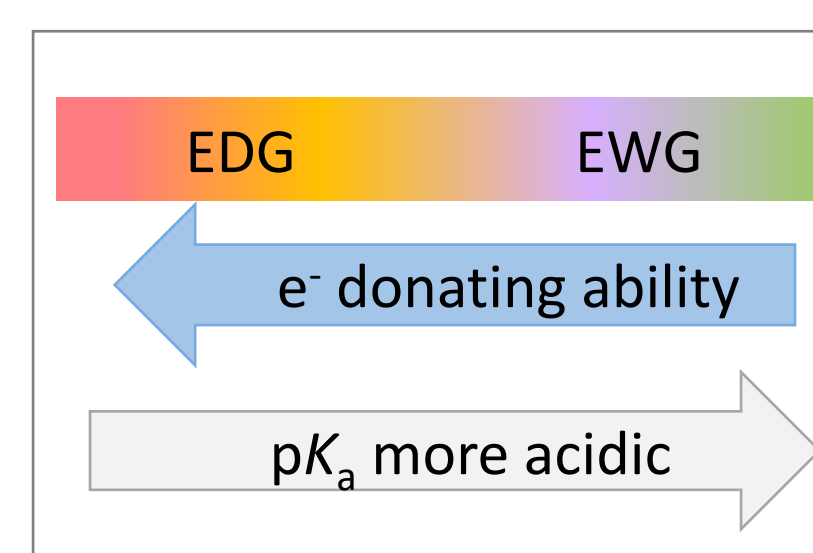

Resonance (A) shifts downfield as the group on top changes from electron-donating (OMe) to electron-withdrawing (Cl, I). The difference between the Cl and I aromatic proton shift can be explained by resonance versus induction effects.

PROTONATION CONSTANTS

	OMePy ₂ N ₂	^H Py ₂ N ₂	^I Py ₂ N ₂	ClPy ₂ N ₂
log K ₁ ^H	8.05(8)	8.35(2)	‡	7.57(6)
log K ₂ ^H	7.01(7)	7.42(2)	‡	5.14(5)
Σ log K _{N-donors}	15.06	15.77	‡	12.71

	OMePyN ₃	^H PyN ₃	^I PyN ₃	ClPyN ₃
log K ₁ ^H	10.32(2)	11.37(1)	11.20(3)	10.50(2)
log K ₂ ^H	8.00(3)	8.22(5)	7.86(9)	7.27(4)
log K ₃ ^H	1.75(4)	1.61(5)	0.68(12)	1.37(4)
Σ log K _{N-donors}	20.07	21.20	19.74	19.14

Potentiometric titrations: I = 0.15 M NaCl, T = 298 K.
‡ Not determined due to insolubility.

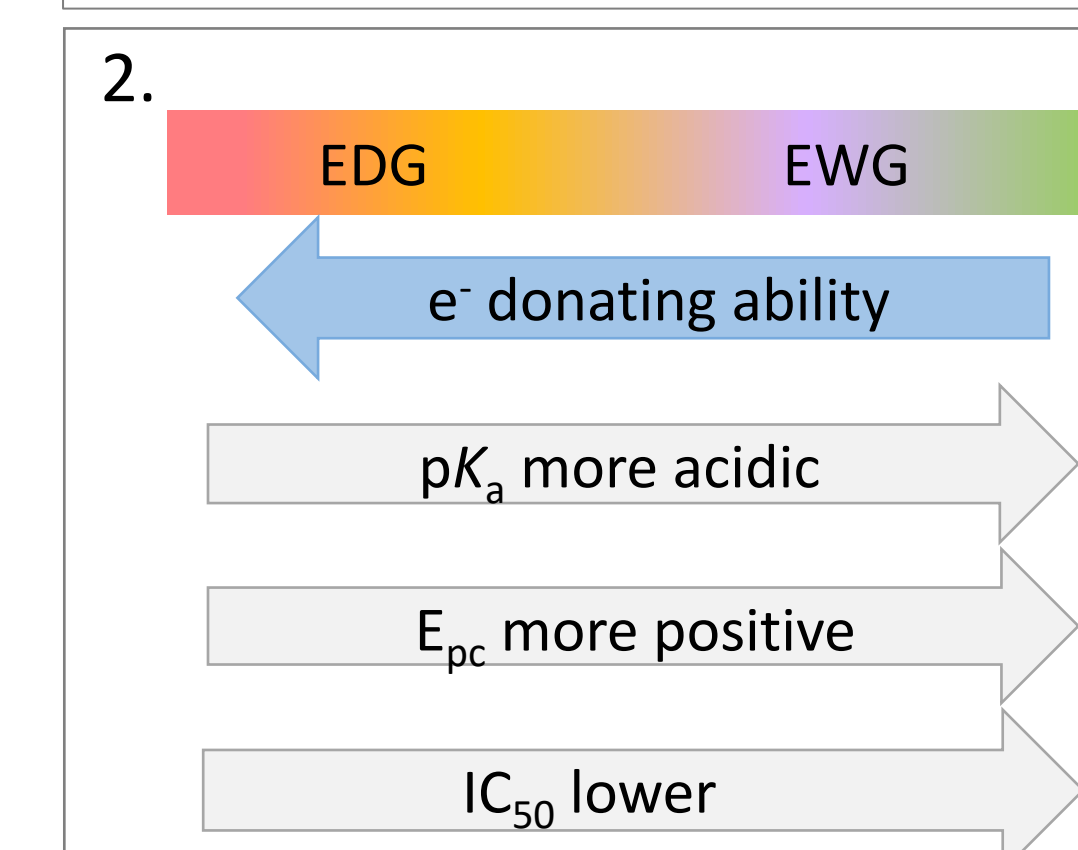

CYCLIC VOLTAMMETRY

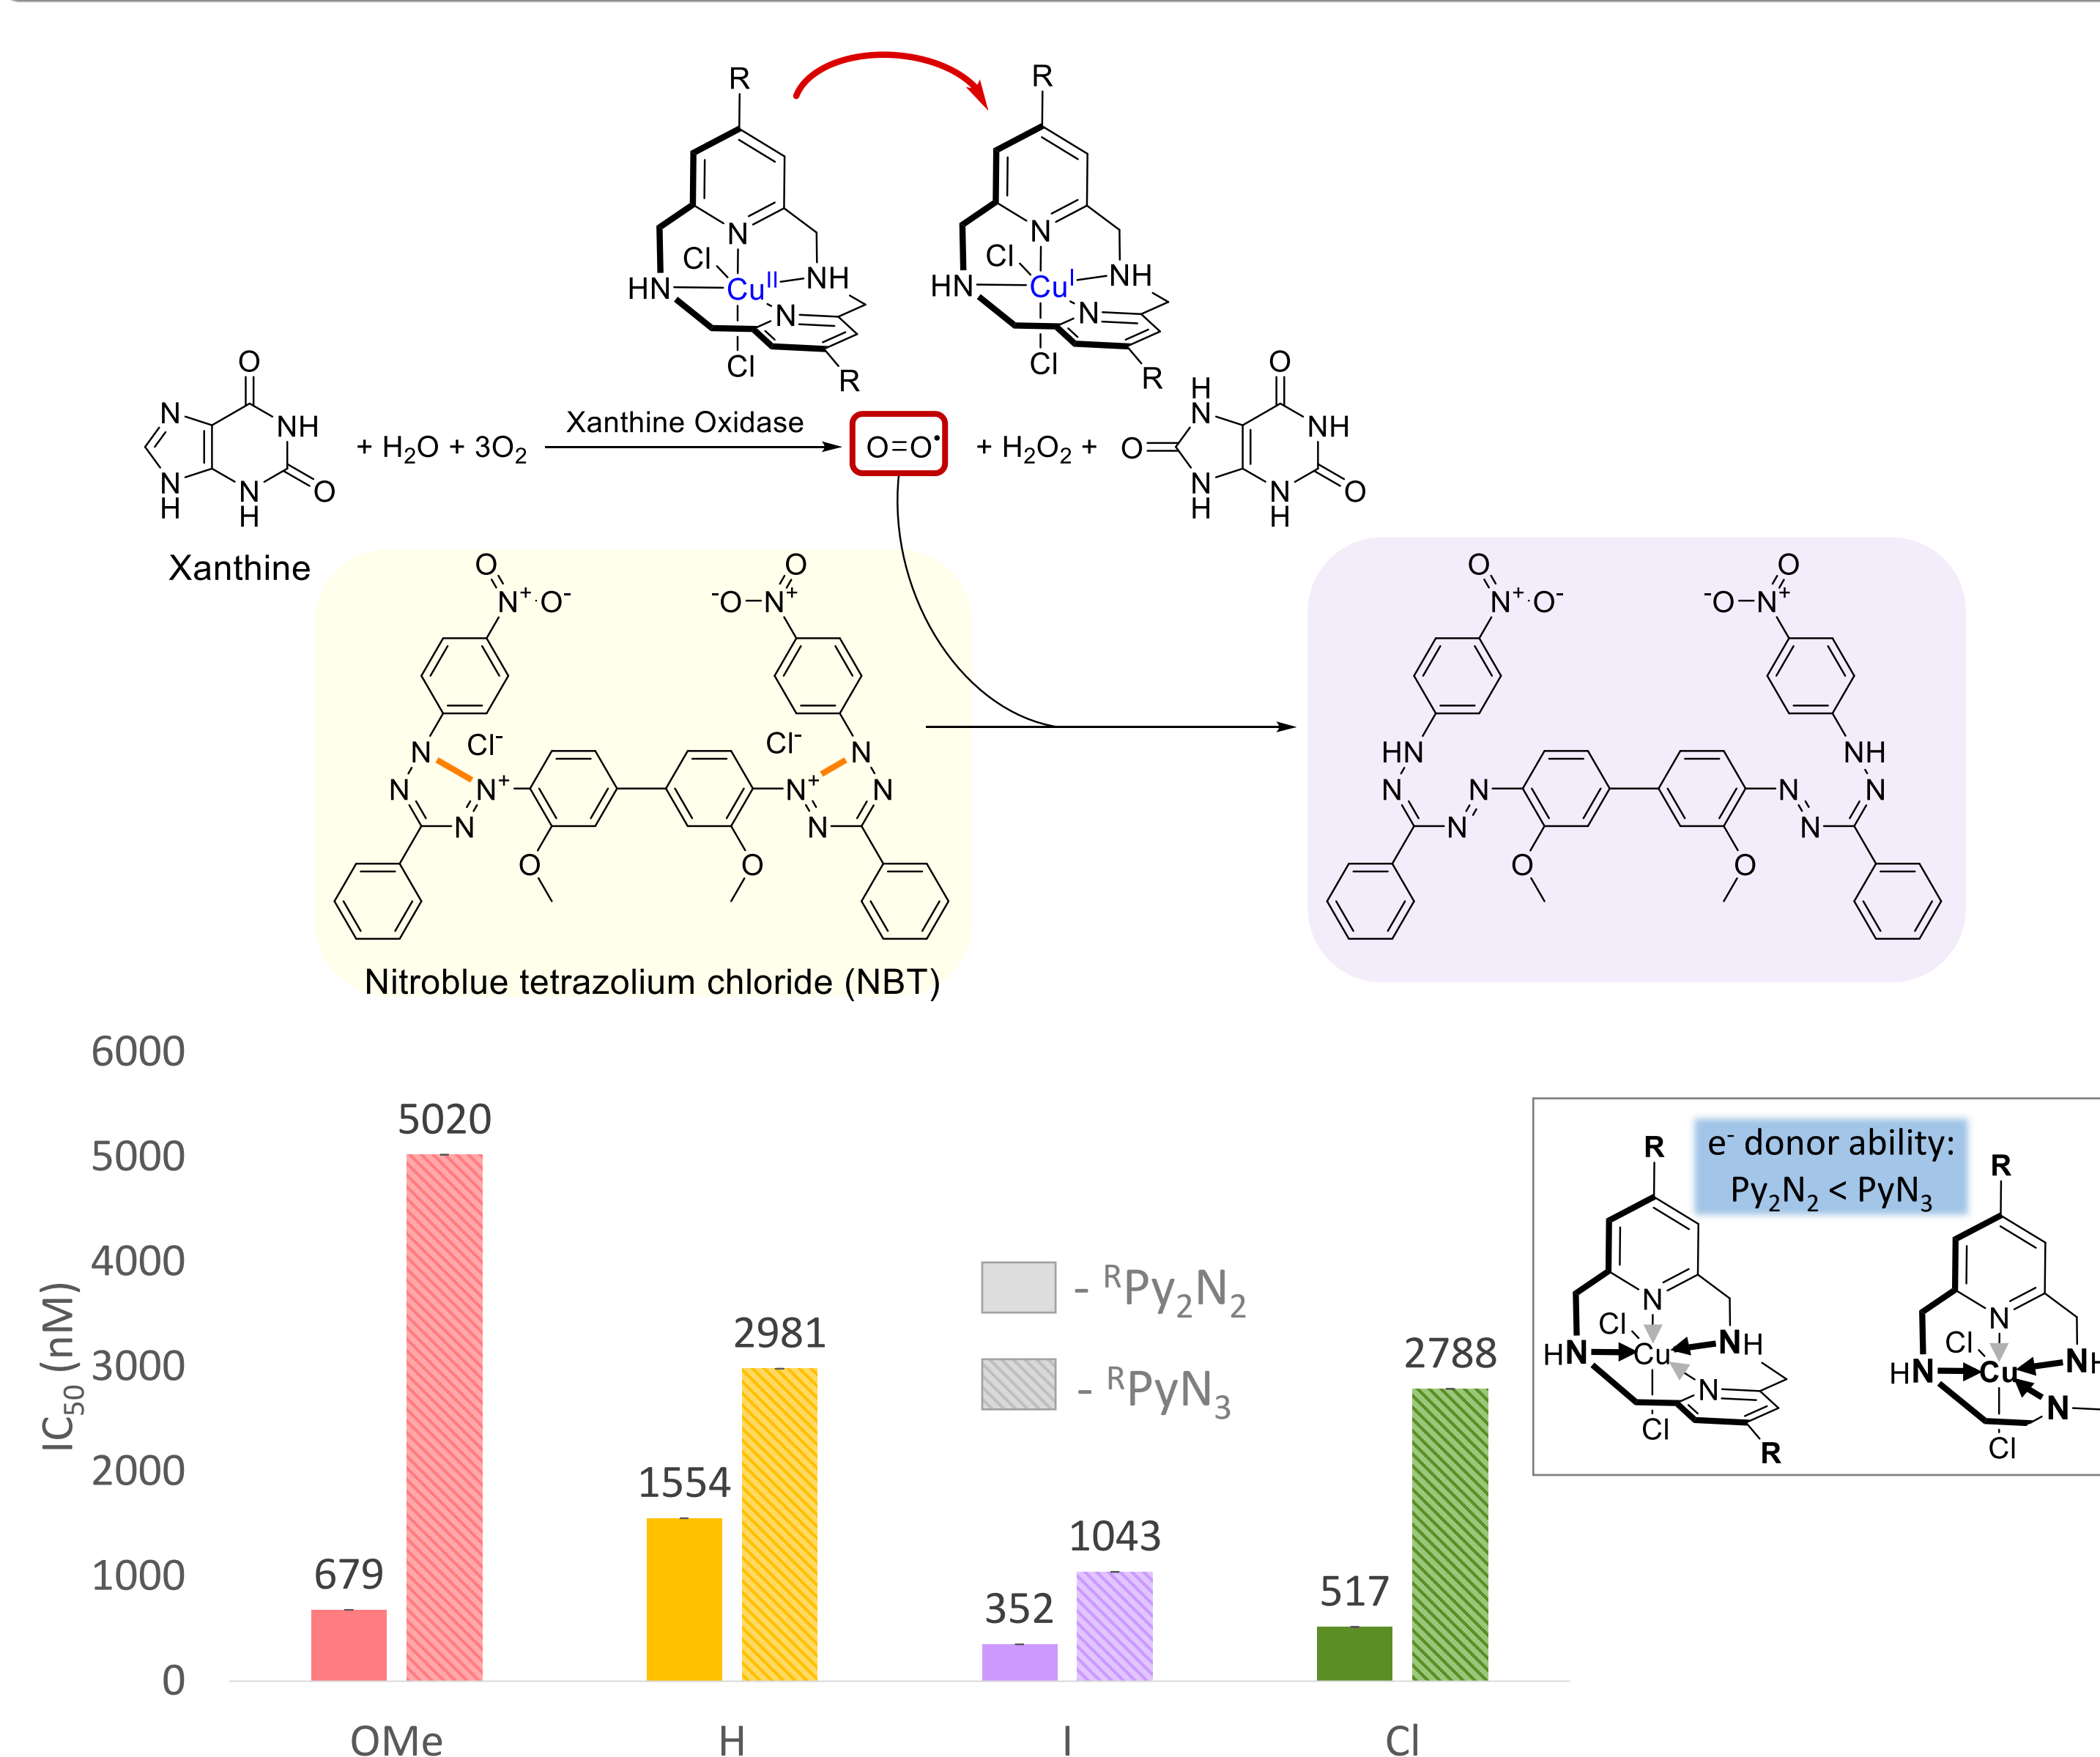

CONCLUSIONS

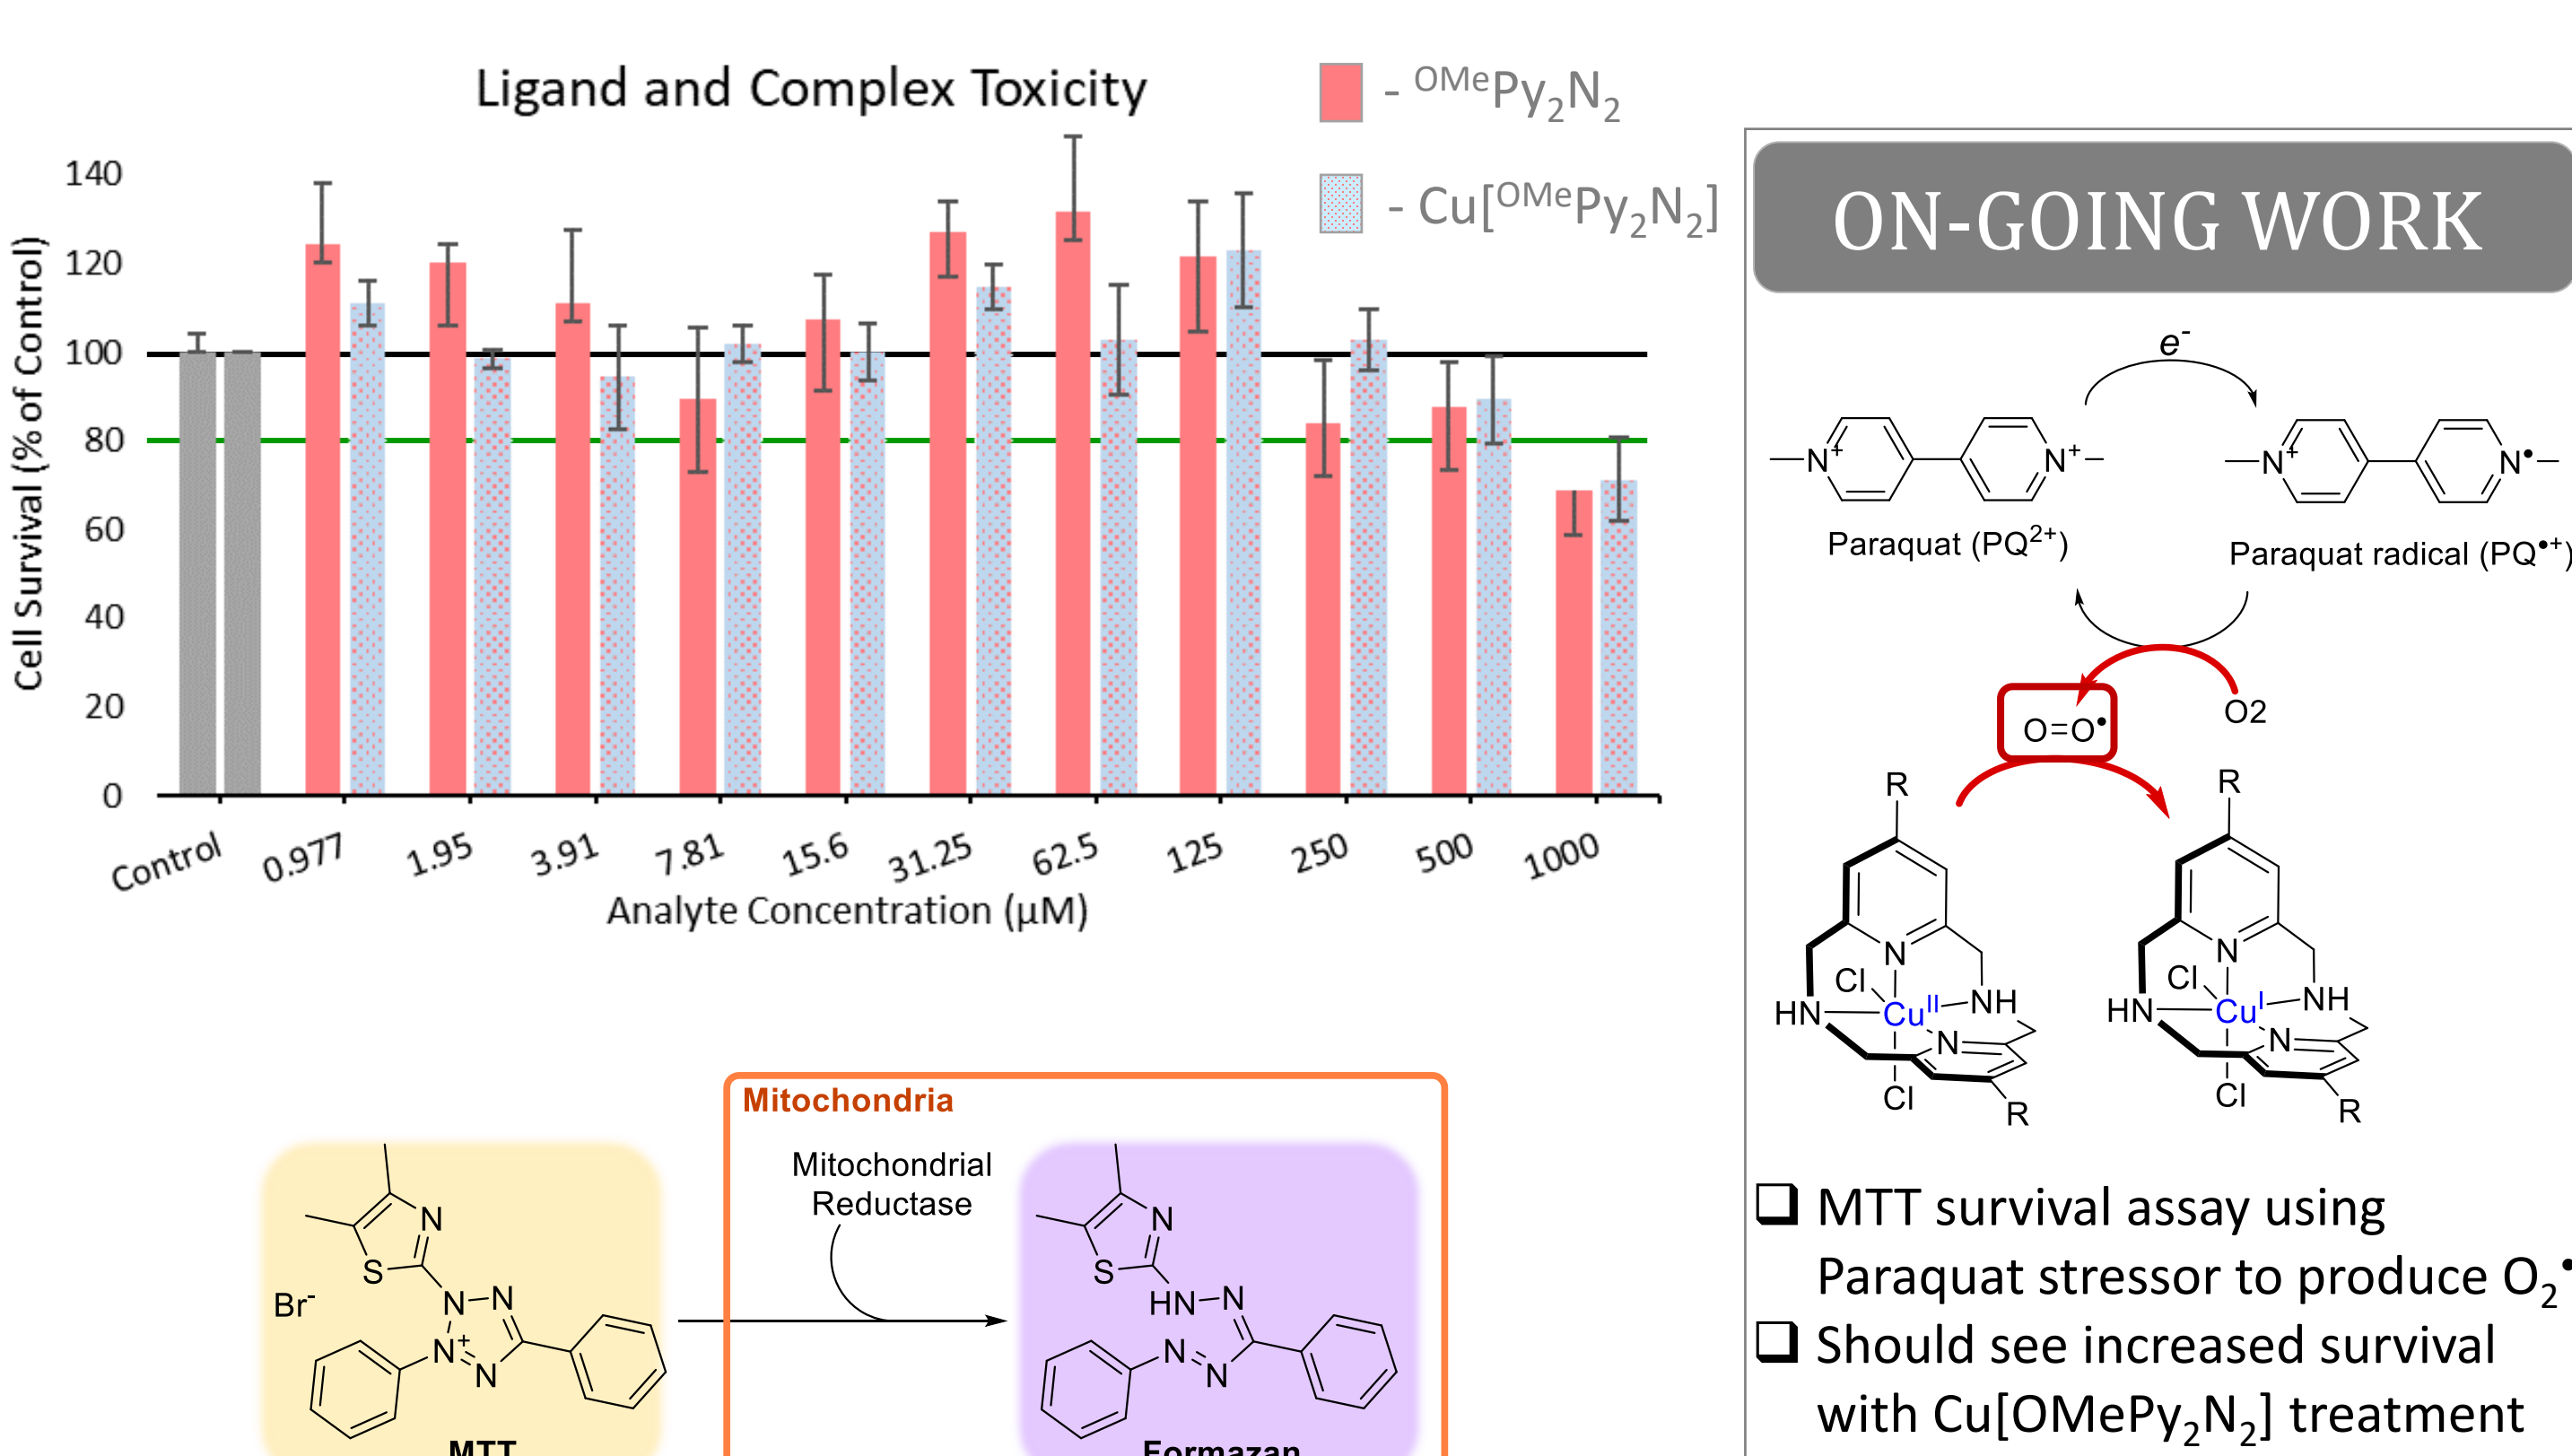

1. Successful synthesis, purification, and characterization of Py_2N_2 series, Cu(II) complexes.
